cc polymucleotide, a ribonucleic acid sequence encoding the GTF mutant, cc an expression cassette comprising the expression cassette, a vector comprising the expression cassette, host cell cointroduced with the vector, a transgenic plant comprising the coating composition, a peace or tuber from the transgenic plant, a paper sizing and/or vector, a seed or tuber from the transgenic plant, a paper sizing and/or coating composition comprising a glucan produced in a plant transformed coating composition comprising a glucan produced in a plant transformed coating a glucan is produced in the amyloplast and/or vacuole or a maize line codicient in starch biosynthesis, transformed with a gene encoding a glucan in a plant. The method comprises transforming a glucan in a plant transforming a glucan in a plant cell under plant growing plant cell with the vector, growing the plant cell under plant growing complynucleotide for a time sufficient to produce the glucan in the regenerated plant, where the vector contains a transforme from regenerated plant, where the vector contains a transforme from complyll hab binding protein to produce the glucan in the close biphosphate carboxylase small subunit, waxy, brittle-1 and complyll hab binding protein to produce the vacuole of sugar beet. Comply in the plant and additions to modified starch comply in the glucan produce and additions to modified starch comply in the plant growing the plant, which comply the produced input materials, is more cost-effective and comply comply the glucan produced by GTF, which utilises comply composition and impart gloss to the paper during coating step.

The present sequence represents GTFB.

CC 15577/1571K/10147, 1448//45/M/105/M/105/M/17/10/M/171A, and K779Q or a GTE D polypeptide having CC vianges at positions from T589D, T589E, N471D/T589D, and CR N471D/T589E. Also included are a glucan produced by the GTF mutant, CC an isolated polymucleotide which encodes Pl or P2, or its complementary CC polymucleotide, a ribonucleic acid sequence encoding the GTF mutant, CC an expression cassette comprising the polymucleotide operably linked to a CC promoter, a vector comprising the polymucleotide operably linked to a CC promoter, a seed or tuber from the transgenic plant, a paper sizing and/or vector, a seed or tuber from the transgenic plant, a paper sizing and/or coating composition comprising a glucan produced in a plant transformed CC with a gene encoding the mutant GTF, wild type or, starch, a latex, with a gene encoding the mutant GTF, wild type or, starch, a latex, the glucan is produced in the amyloplast and/or vector, a maize line comprising the glucan produced and transformed with a gene encoding a glucan is produced in the amyloplast and/or vector is useful CC comprising the glucan (paper sizing/coating agent). The vector is useful CC comprising the plucan (paper sizing/coating agent). The vector is useful CC conditions to produce a regenerated plant and inducing expression of the polymucleotide for a time siffcient to produce a transforming a conditions to produced in the amyloplast of potato or the vacuole of sugar beet. CC glucans are useful as substitutes for and additions to modified starch cc is produced in the amyloplast of potato or the vacuole of sugar beet. CC groperties and impart gloss to the paper during coating step.

CC manifacture utilising the glucan produced by GTF, which utilises biologically produced input materials, is more cost-effective and comprise starch by the indexer using the GTFB mutant of the invention.

CC manifacture utilising the glucan produced by GTF, which utilises biologically protein for the invention.
                                                                                    RESULT 4

Claim 36; Page -; 44pp; English.

Y169A/Y170A/Y171A, and K779Q or a GTF D polypeptide having changes at positions from T589D, T589E, N471D, N471D/T589D, and M471D/T589E. Also included are a glucan produced by the GTF mutant, and isolated polynucleotide which encodes P1 or P2, or its complementary polynucleotide, a ribonucleic acid sequence encoding the GTF mutant, polynucleotide, a ribonucleic acid sequence encoding the GTF mutant, polynucleotide, a ribonucleic acid sequence encoding the GTF mutant, polynucleotide, a ribonucleic acid sequence encoding the GTF mutant, polynucleotide operably linked to a promoter, a vector comprising the expression cassette, host cell introduced with the vector, a transgenic plant comprising the coating composition comprising a glucan produced in a plant transformed with a gene encoding the mutant GTF, wild type or, starch, a latex, thermoplastic molecule or their combinations or glucan and starch where the glucan is produced in the amyloplast and/or vacuole or a maize line and the interpretation of the complexity of the combination of the complexity of the combination of the combi regenerated plant, where the vector contains a transit sequence from ribulose biphosphate carboxylase small subunit, waxy, brittle-1 and chlorophyll AB binding protein to produce a transgenic plant, and glucan is produced in the amyloplast of potato or the vacuole of sugar beet. Glucans are useful as substitutes for and additions to modified starch and latexes in paper manufacture. Unlike prior art techniques, which require input materials that produce chemical effluents, paper manufacture utilising the glucan produced by GTF, which utilises biologically produced input materials, is more cost-effective and the glucan is produced in the amyloplast and/or vacuole or a maize line deficient in starch biosynthesis, transformed with a gene encoding a glucosyltransferase B or D enzyme, wild-type or mutant and a paper comprising the glucan (paper sizing/coating agent). The vector is useful for producing a glucan in a plant. The method comprises transforming a plant cell with the vector, growing the plant cell under plant growing the plant cell with the vector, growing the plant and inducing expression of the polynacient to produce a regenerated plant and inducing expression of the polynacient of the transfer sequence from The invention an isolated protein comprising a glucosyltransferase (GTF) B polypeptide having changes at position from I448V, D457N, D567T, K1014T, D457N/D567T, D457N/D571K, D567T/D571K, D567T/D571K, D567T/D571K/K1014T, I448V/D457N/D567T/D571K/K779Q/K1014T,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Note: The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     environmentally friendly. Moreover, glucans also exhibit thermoplastic properties and impart gloss to the paper during coating step. The present sequence represents a GTFB mutant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the GTFB sequence appearing as AAU98027 and the information in claim 36.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Synthetic
The invention an isolated protein comprising a glucosyltransferase (GTF) B polypeptide having changes at position from 1448V, D457N, D567T, X1014T, D457N/D567T, D457N/D571K, D567T/D571K, D567T/D571K/K1014T, 1448V/D457N/D567T/D571K/K779Q/K1014T, D567T/D571K/K779Q/K1014T, D567T/D571K/K779Q/K1014T, D567T/D571K/K779Q/K1014T, D567T/D571K/K779Q/K1014T, D567T/D571K/K779Q/K1014T, D769A/X170A/X171A, and K779Q or a GTF D Dolypeptide having Changes at positions from T589D, T589E, N471D, M471D/T589D, and N471D/T589E. Also included are a glucan produced by the GTF mutant, N471D/T599E. Also included are a glucan produced by the GTF mutant, an isolated polynucleotide which encodes P1 or P2, or its complement
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Misc-difference
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Streptococcus mutans
                                                                                                                                                                                                                                                                                              Glucosyltransferase B or D protein useful for producing a glucan useful as substitutes for and additions to modified starch and latexes in paper manufacture, comprises mutations in specific positions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         07-JUN-1995;

cc promoter, a vector comprising the expression cassette, host cell introduced with the vector, a transgenic plant comprising the coating composition comprising a glucan produced in a plant transformed coating composition comprising a glucan produced in a plant transformed coating composition comprising a glucan produced in a plant transformed coating composition comprising a glucan produced in a plant transformed comprising the mutant GTF, wild type or, starch, a latex, the glucan is produced in the amyloplast and/or vacuole or a maize line comprising the glucan (paper sizing/coating agent). The vector is useful comprising a glucan in a plant. The method comprises transforming a glucan in a plant. The method comprises transforming a comprising a glucan in a plant. The method comprises transforming a plant cell with the vector, growing the plant and inducing expression of the polynucleotide for a time sufficient to produce the glucan in the regenerated plant, where the vector contains a transit sequence from ribulose biphosphate carboxylase small subunit, waxy, brittle-1 and composition of the polynucleotide for a time sufficient to produce the glucan in the require input materials to produce a transgenic plant, and glucan is produced in the amyloplast of potato or the vacuole of sugar beet. Claucans are useful as substitutes for and additions to modified starch claucans are useful as substitutes for and additions to modified starch composically produced input materials, is more cost-reflective and compromentally friendly. Moreover, glucans also exhibit thermoplastic composically produced input materials, is more cost-effective and composically produced input materials, is more cost-effective and composically produced in put materials, is more cost-effective and composition in claim 36.

CC was created by the indexer using the GTFB mutant of the invention. CC was created by the indexer using the GTFB sequence appearing as AAU98027 and the information in claim 36.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RESULT 6

mutans glucosyltransferase GTFB mutant D457N/D567T

```
C(GTF) B polypeptide having changes at position from 1448V, D457N, C(BF7)D571K/K1014T, 1448V/D457N/D57T/D571K/K7014T, 1448V/D457N/D57T/D571K/K709AY17DA, and K779Q or a GTF D polypeptide having changes at positions from T89Dp 7189E, M47D, N47D/T89DF, and K779Q or a GTF D polypeptide having changes at positions from T89Dp 7189E, M47D, N47D/T89DF, and C(M47D/T89DF, Also included are a glucan produced by the GTF mutant, C(M47D/T89DF, Also included are a glucan produced by the GTF mutant, C(M47D/T89DF, Also included are a glucan produced by the GTF mutant, C(M47D/T89DF, Also included are a glucan produced by the GTF mutant, C(M47D/T89DF, Also included are a glucan produced by the GTF mutant, C(M47D/T89DF, Also included are a glucan produced by the GTF mutant, C(M47D/T89DF, Also included are a glucan produced by the GTF mutant, C(M47D/T89DF, Also included are a glucan produced by the GTF mutant, C(M47D/T89DF, Also included are a glucan produced in a paper string and/or vector, a seed or tuber from the transgenic plant comprising the cell continuous composition comprising a glucan produced in a plant transformed comprising the glucan is produced in the amyloplast and/or vacuole or a maize line cell furth a gene encoding a line of the glucan is produced in the amyloplast and/or vacuole or a maize line cell furth the vector, growing the plant gene encoding a glucapitant of producing a glucan in a plant. The method comprises transforming a glucapitant of producing a glucan in a plant and inducing expression of the comprising the glucan produced the plant growing to plant and inducing expression of the comprising the glucan produced the plant growing to plant and inducing expression of the comprisions to produce a regenerated plant and inducing expression of the comprisions to produced a substitute for a the available of the vacuole of sugar beet.

C(C) conditions to produced as substitutes for and additions to modified starch dispart gloss to the paper during cost-figuration but comprise the glucan produced by GTF, which

(GTF) B polypeptide having changes at position from 1448V, D457N, CC D567T, K1014T, D457N/D567T, D457N/D571K, D567T/D571K, CC D567T/D571K/K1014T, 1448V/D457N/D567T/D571K, D567T/D571K, CC P169A/Y170A/Y171A, and K779Q or a GTF D polypeptide having Y169A/Y170A/Y171A, and K779Q or a GTF D polypeptide having CC changes at positions from T589D, T589E, N471D, N471D/T589D, and K779Q or a five complementary CC changes at positions from T69D, T589E, N471D, N471D/T589D, and CC changes at positions from T69D, T589E, N471D, N471D/T589D, and x779Q or a flow complementary CC polynucleotide, a ribonucleoic acid sequence encoding the GTF mutant, CC promoter, a vector comprising the expression cassette, host cell CC introduced with the vector, a transgenic plant comprising the produced in a plant transformed CC coating composition comprising a glucan produced in a plant transformed CC with a gene encoding the mutant GTF, wild type or, starch, a latex, cc the glucan is produced in the amyloplast and/or vacuole or a maize line CC comprising the placan (paper sizing/coating agent). The vector is useful CC comprising the plant plant wild type or mutant and a paper CC comprising the glucan in a plant. The method comprises transforming a glucan in a plant. The method comprises transforming a glucan in a plant wild type or mutant and a paper CC conditions to produce a regenerated plant and inducing expression of the polynucleotide for a time sufficient to produce the glucan in the cc conditions to produce a regenerated plant, where the vector contains a transfer lead of the conditions by protein to produce a transgenic plant, and glucan in the conditions by phosphate carboxylase small subunit, waxy, brittle-1 and conspirated in the amyloplast of potato or the vacuole of sugar beet. CC Glucans are useful as substitutes for and additions to modified starch
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        07-JUN-1995;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         require input materials that produce chemical effluents, paper manufacture utilising the glucan produced by GTF, which utilises biologically produced input materials, is more cost-effective and environmentally friendly. Moreover, glucans also exhibit thermoplastic properties and impart gloss to the paper during coating step. The present sequence represents a GTFB mutant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the GTFB sequence appearing as AAU98027 and the information in claim 36.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 36; Page -; 44pp; English.
                                        properties and impart gloss to the paper during coating step. The present sequence represents a GTPB mutant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the GTFB sequence appearing as land the information in claim 36.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (NICH/)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   2002-414332/44
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               manufacture,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         cc comprising the glucan (paper sizing/coating agent). The vector is useful cofor producing a glucan in a plant. The method comprises transforming a cc plant cell with the vector, growing the plant cell under plant growing cc conditions to produce a regenerated plant and inducing expression of the collynucleotide for a time sufficient to produce the glucan in the cribuse biphosphate carboxylase small subunit, waxy, brittle-1 and cc ribulose biphosphate carboxylase small subunit, waxy, brittle-1 and cc plant are useful as substitutes for and additions to modified starch cardiant are useful as substitutes for and additions to modified starch cardiants are useful as substitutes for and additions to modified starch cardiants in paper manufacture. Unlike prior art techniques, which crequire input materials that produce chemical effluents, paper continguated input materials, is more cost-effective and composition produced input materials, is more cost-effective and composition in present sequence is not shown in the specification but cardiant of the invention.

Cc was created by the indexer using the GTFB mutant of the invention as AAU98027 and the information in claim 36.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches

cc (GTF) B polypeptide having changes at position from 1448V, D457N, CC D567T, K1014T, D457N/D567T, D457N/D571K, D567T/D571K, CC P169A/Y170A/Y171A, and K779Q or a GTF D polypeptide having changes at positions from T599D, T589E, N471D, N471D/T589E. Also included are a glucan produced by the GTF mutant, CC N471D/T589E. Also included are a glucan produced by the GTF mutant, CC an isolated polymucleotide which encodes P1 or P2, or its complementary comprometer, a vector comprising the polymucleotide operably linked to a promoter, a vector comprising the polymucleotide operably linked to a promoter, a vector comprising the polymucleotide operably linked to a promoter, a vector of the transgenic plant comprising the complementary coating composition comprising a glucan produced in a plant transformed coating composition comprising a glucan produced in a plant transformed comprising the mutant GTF, wild type or, starch, a later, cc thermoplastic molecule or their combinations or glucan and starch where the glucan is produced in the amyloplast and/or vacuole or a maize line cc deficient in starch biosynthesis, transformed with a gene encoding a glucan (paper sizing/coating agent). The vector is useful comprising the glucan in a plant. The method comprises transforming a plant cell with the vector, growing the plant cell under plant growing to polynucleotide for a time sufficient to produce the glucan in the cc conditions to produce a regenerated plant and inducing expression of the regenerated plant, where the vector contains a transit sequence from componence of the plant and plant, and glucan in the cc plant and plant, and glucan in paper manufacture. Unlike prior art techniques, which cc and latexes in paper manufacture. Unlike prior art techniques, which cc and latexes in paper manufacture contains a fill and the fill and contains a manufacture. Which can be produced the fill as substitutes for and additions to modified starch can be produced to the accordance the fill and contains to modified starch can be produce
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               07-JUN-1995;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   manufacture utilising the glucan produced by GTF, which utilises biologically produced input materials, is more cost-effective and environmentally friendly. Moreover, glucans also exhibit thermoplastic properties and impart gloss to the paper during coating step. The present sequence represents a GTFB mutant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the GTFB sequence appearing as AAU98027
                                                                                                                                                                                                                                                                                                                                                                                                                                            11-DEC-1998;

CC an isolated polymucleotide which encodes Pl or P2, or its complementary CC polymucleotide, a ribonucleic acid sequence encoding the GTF mutant, CC an expression cassette comprising the polymucleotide polymucleotide, a ribonucleic acid sequence encoding the GTF mutant, CC an expression cassette comprising the polymucleotide operably linked to a CC promoter, a vector comprising the expression cassette, host cell controduced with the vector, a transgenic plant comprising the vector, a transgenic plant comprising the coating composition comprising a glucan produced in a plant transformed coating composition comprising a glucan produced in a plant transformed coating composition molecule or their combinations or glucan and starch where the glucan is produced in the amyloplast and/or vacuole or a maize line comprising the glucan in a plant for producing a glucan producing a glucan producing a glucan producing a glucan in a plant. The wethod comprises transforming a glucan in a plant the wector is useful comprising the glucan (paper sizing/coating agent). The vector is useful comprising the glucan in a plant the method comprises transforming a conditions to produce a regenerated plant and inducing expression of the conditions to produce a regenerated plant to produce the glucan in the conditions to produce the vector contains a transit sequence from the regular conditions to produce a transgenic plant, and glucan is produced in the amyloplast of potato or the vacuole of sugar beet. C glucans are useful as substitutes for and additions to modified starch c and latexes in paper manufacture. Unlike prior at techniques, which c require input materials that produce chemical effluents, paper manufacture unlike prior at techniques, which c require input materials, is more cost-effective and c properties and impart gloss to the paper during coating step.

The present sequence represents a GTFB mutant of the invention.

The present sequence is not shown in the specification but the coating as AAU98027 and the invention in c

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a monoclonal antibody against dental caries and an anti-caries agent composed of a monoclonal antibody produced by streptococcus mutans, particularly mouse-hybridoma MHP136 (FERM P-17566) or mouse-hybridoma MHP136 (FERM P-17567), against an enzyme having inhibitive activity against water insoluble glucan synthetase of glucosy transferase B. The monoclonal antibody specifically inhibits water...

CC V169A/Y170A/Y171A, and K779Q or a GTF D polypeptide having CC changes at positions from T589D, T589E, N471D, M471D/T589D, and CR 471D/T589B. Also included are a glucan produced by the GTF mutant, CC parmoter, a vector comprising the expression cassette comprising the polymucleotide operably linked to a promoter, a vector comprising the expression cassette, host cell introduced with the vector, a transgenic plant comprising the vector, a seed or tuber from the transgenic plant, a paper sizing and/or CC coating composition comprising a glucan produced in a plant transformed with a gene encoding the mutant GTF, wild type or, starch, a latex, comprising the glucan is produced in the amyloplast and/or vacuole or a maize line CC deficient in starch biosynthesis, transformed with a gene encoding the glucan in a plant transforming a glucan in a plant cell with a gene encoding the starch biosynthesis, transformed with a gene encoding a conditions of glucan and starch where CC deficient in starch biosynthesis, transformed with a gene encoding a glucan in a plant. The method comprises transforming a CC comprising the glucan (paper sizing/coating agent). The vector is useful CC comprising the glucan in a plant. The method comprises transforming a CC plant cell with the vector, growing the plant and inducing expression of the CC polymucleotide for a time sufficient to produce the glucan in the CC polymucleotide for a time sufficient to produce the glucan in the CC plants are useful as substitutes for and additions to modified starch conditions to produce in the amyloplast of potato or the vacuole of sugar beet. CC glucans are useful as substitutes for and additions to modified starch and latexes in paper manufacture. Unlike prior art techniques, which centure input materials that produce chemical effluents, paper conditions to modified starch conditions to produce a paper deficient to produce axibit the

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Score

                                                                                                                                                                                                                                                                                                                                           FUNCTION: PRODUCTION OF EXPRACELLULAR GLUCANS, THAT ARE THOUGHT TO PLAY A KEY ROLE IN THE DEVELOPMENT OF THE DENTAL PLAQUE BECAL OF THEIR ABILITY TO ADHERE TO SMOOTH SURFACES AND MEDIATE THE AGGREGATION OF BACTERIAL CELLS AND FOOD DEBRIS.

CATALYTIC ACTIVITY: Sucrose + {(1,6)-alpha-D-glucosyl}(N) = D-fructose + {(1,6)-alpha-D-glucosyl}(N+1).

SUBCELLULAR LOCATION: Secreted.
DISBASE: DENTAL CARTES.
                                                                                                                                                                                                                                    FORMS OF GLUCANS.

SIMILARITY: TO OTHER GLUCOSYLTRANSFERASES AND SOME BINDING PROTEIN FROM S. MUTANS.

SIMILARITY: Contains 16 cell wall binding repeats.
                                                                                                                                                                                                                                                                                                 MISCELLANEOUS: GTF I SYNTHESIZES WATER-INSOLUBLE GLUCANS (AL

CATALYTIC ACTIVITY: Sucrose + { (1,6)-alpha-D-glucosyl} (N) = fructose + { (1,6)-alpha-D-glucosyl} (N+1).

SUBCELLULAR LOCATION: Secreted.

DISEASE: DENTAL CARIES.

MISCELLANBOUS: GTF-I SYNTHESIZES WATER-INSOLUBLE GLUCANS (ALMISCELLANBOUS: GTF-I SYNTHESIZES WATER-INSOLUBLE GLUCANS).
                                                                                                                                                                                                                                                                                                                                     SIMILARITY: TO OTHER GLUCOSYLTRANSFERASES AND SOM
BINDING PROTEIN FROM S.MUTANS.
SIMILARITY: Contains 6 cell wall binding repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                               NISCELLANEOUS: GTF-I SYNTHESIZES WATER-INSOLUBLE GLUCANS (ALPH 1,3-LINKED GLUCOSE AND SOME 1,6 LINKAGES), GTF-S SYNTHESIZES WATER-SOLUBLE GLUCANS (ALPHA 1,6-GLUCOSE). Mol. Biochem. Parasitol. 55:115-126(1992).

Mol. Hiochem. Parasitol. 59:115-126(1992).

CATALYTIC ACTIVITY: D-glyceraldehyde 3-phosphate + phosphate + NAD(+) = 3-phospho-D-glyceroyl phosphate + NADH.

-!- PATHWAY: Second phase of glycolysis; first step.

-!- SUBUNIT: Homotetramer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Leishmania mexicana.

"Isolation and evaluation of expression of the glyceraldehye-3-
phosphate dehydrogenase gene of Coccidioides immitis.";

Submitted (JUL-2000) to the EMBL/GenBank/DDBJ databases.

-i- CATALYTIC ACTIVITY: D-glyceraldehyde 3-phosphate + phosphate

-i- AND(+) = 3-phospho-D-glyceroyl phosphate + NADH.

-i- PANTHWAY: Second phase of glycolysis; first step.

-i- SUBCULTLAR LOCATION: Cytoplasmic (By similarity).

-i- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).

-i- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).

J. Biochem. 162:501-507(1987).

CATALYTIC ACTIVITY: D-glyceraldehyde 3-phosphate + phosphate 
CATALYTIC ACTIVITY: D-glyceroyl phosphate + NADH.

RAD(+) = 3-phospho-D-glyceroyl phosphate + NADH.

PATHWAY: Second phase of glycolysis; first step.

SUBCELLULAR COCATION: Cytoplasmic.

SUBCELLULAR LOCATION: Cytoplasmic.

SIMILARITY: Belongs to the glyceraldehyde 3-phosphate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              dehydrogenase family.
